

INSTALLING EXTENSION ON MAGENTO 2 USING WEB SETUP WIZARD

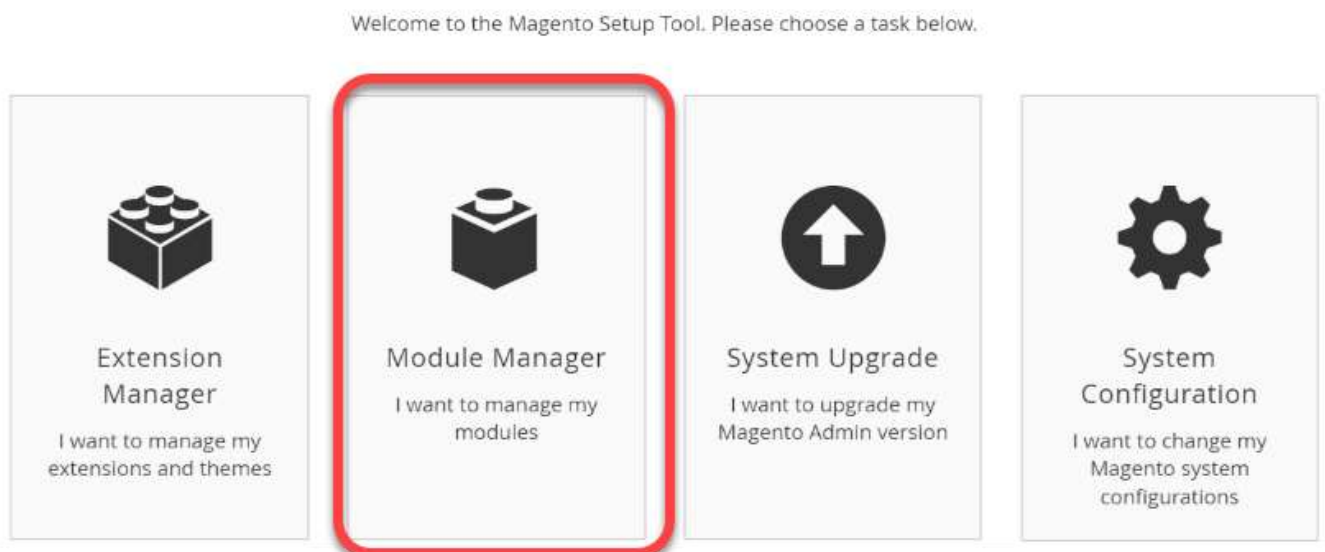

Before installation (Prerequisite) Download extension and move folders from archive to your Magento 2 root directory.

Login to your [Magento 2 Admin Panel](#)

[Open Component Manager](#)

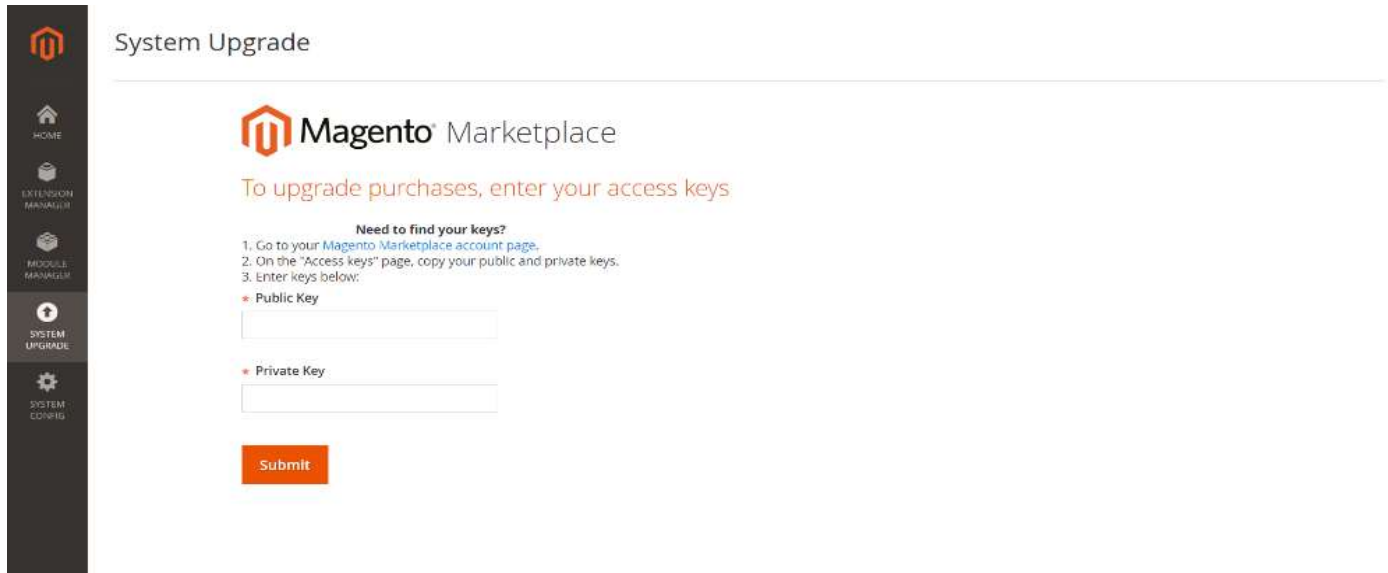

Navigate to System > Web Setup Wizard > Extension Manager

For Magento (1.x & 2.x) Design, Development & Customization please visit us at:
<https://ecommerce.folio3.com/magento-development-company/>

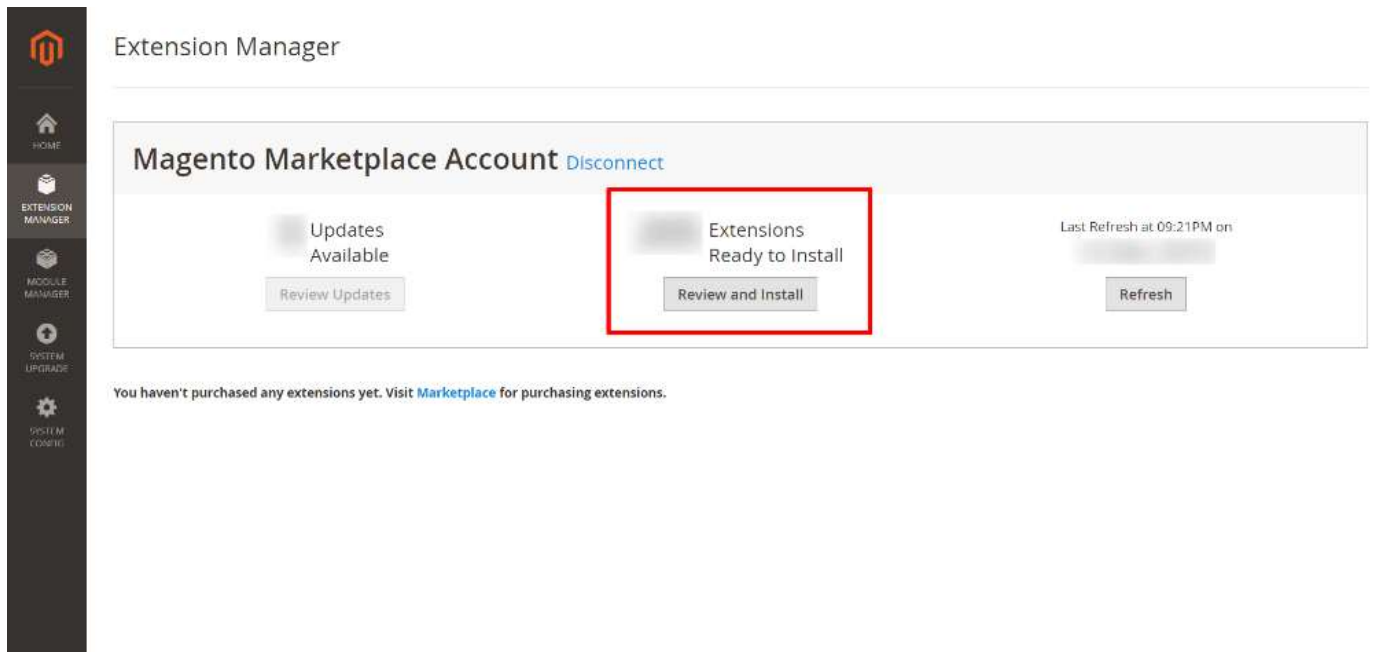

Enable extension

1. Enter Public Key and Private key that can be found from Access Key section from marketplace account

The screenshot shows the 'System Upgrade' page in the Magento Admin interface. On the left is a vertical sidebar with navigation icons for Home, Extension Manager, Module Manager, System Upgrade (highlighted), and System Config. The main content area is titled 'System Upgrade' and features the 'Magento Marketplace' logo. Below the logo, it says 'To upgrade purchases, enter your access keys'. A section titled 'Need to find your keys?' provides instructions: 1. Go to your Magento Marketplace account page, 2. On the 'Access keys' page, copy your public and private keys, 3. Enter keys below. There are two input fields: 'Public Key' and 'Private Key', each with a red asterisk icon. A red 'Submit' button is located below the fields.

2. Review & Install the extension

The screenshot shows the 'Extension Manager' page in the Magento Admin interface. The sidebar on the left is the same as in the previous screenshot, with 'Extension Manager' highlighted. The main content area is titled 'Extension Manager' and features a 'Magento Marketplace Account Disconnect' header. Below the header, there are three main sections: 'Updates Available' with a 'Review Updates' button, 'Extensions Ready to Install' (highlighted with a red box) with a 'Review and Install' button, and 'Last Refresh at 09:21PM on' with a 'Refresh' button. At the bottom, there is a message: 'You haven't purchased any extensions yet. Visit Marketplace for purchasing extensions.'

Start Readiness Check

The readiness check makes sure your server and environment are set up correctly for enabling or disabling modules. In the [event](#) of errors, you can consult troubleshooting suggestions in this guide.

To start, click either **Start Readiness Check** or **Next**. A sample follows.

A progress bar with three steps: 1. Readiness Check (active, highlighted with a black circle), 2. Create Backup, and 3. Disable. To the right of the progress bar are two buttons: a grey 'Back' button and an orange 'Next' button.

Step 1: Readiness Check

Let's check your environment for the correct PHP version, PHP extensions, file permissions and compatibility.

A rectangular orange button with the text 'Start Readiness Check' in white.

Readiness check success

The following figure shows an example of a successful readiness check. If all tests passed, click **Next** and continue with the next step.

For Magento (1.x & 2.x) Design, Development & Customization please visit us at:
<https://ecommerce.folio3.com/magento-development-company/>

Step 1: Readiness Check

✓ **Completed!** You can now move on to the next step.

- ✓ **Check Updater Application Availability**
Updater application is available.
- ✓ **Check Cron Scripts**
Cron script readiness check passed.
- ✓ **Check Component Dependency**
Component dependency is correct.
- ✓ **PHP Version Check**
Your PHP version is correct (5.6.23).
- ✓ **PHP Settings Check ***
Your PHP settings are correct.
- ✓ **PHP Extensions Check**
You meet 15 out of 15 PHP extensions requirements. [Show detail](#)

Readiness check failure

Messages similar to the following display if any readiness check fails.

- ✗ **Check Updater Application Availability**
Updater application is not available. [Hide detail](#)

Please, download and install Updater application.

For additional assistance, see

For Magento (1.x & 2.x) Design, Development & Customization please visit us at:
<https://ecommerce.folio3.com/magento-development-company/>

In the event of failure, see one of the following sections:

- [Updater check failure](#)
- [Cron script check failure](#)
- [Component dependency check failure](#)
- [PHP version readiness check issues](#)
- [PHP settings errors](#)
- [PHP extensions check failure](#)

Back up the file system and database

Select the checkbox of each item to back up and click **Create Backup**.

The following figure shows an example of backing up everything.

Step 2: Create Backup

Backup Options

Code

Media

Database

Let's check your disk space availability for taking selected backups, and then create the backups.

Create Backup

Enable/Disable

To enable or disable your module, click the appropriate button. The following figure shows an example of disabling a module, in which case you click **Disable**

For Magento (1.x & 2.x) Design, Development & Customization please visit us at:
<https://ecommerce.folio3.com/magento-development-company/>

Step 3: Disable

⚠ We will take your store offline to protect shoppers during the duration of the disable activity.

We're ready to disable Magento_AdminNotification.

Disable

Create the Magento crontab

If the extension requires any type cron execution, follow the steps to install the cron.

Starting with version 2.2, Magento creates a crontab for you. We add the Magento crontab to any configured crontab for the Magento file system owner. In other words, if you already set up crontabs for other extensions or applications, we add the Magento crontab to it.

The Magento crontab is inside #~ MAGENTO START and #~ MAGENTO END comments in your crontab.

To create the Magento crontab:

1. Log in as, or switch to, the [Magento file system owner](#).
2. Change to your Magento installation directory.
3. Enter the following command:

```
bin/magento cron:install [--force]
```

Use --force to rewrite an existing Magento crontab.
