

# INSTALLING EXTENSION ON MAGENTO 2 USING WEB SETUP WIZARD

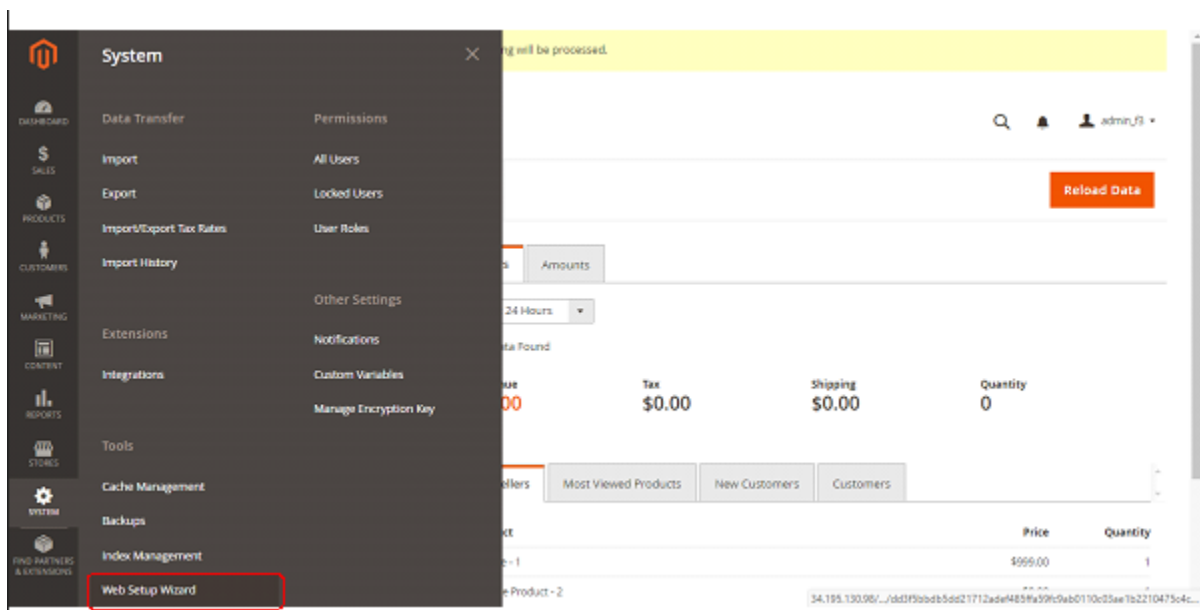

[Before installation \(Prerequisite\)](#)

Download extension and move folders from archive to your Magento 2 root directory.

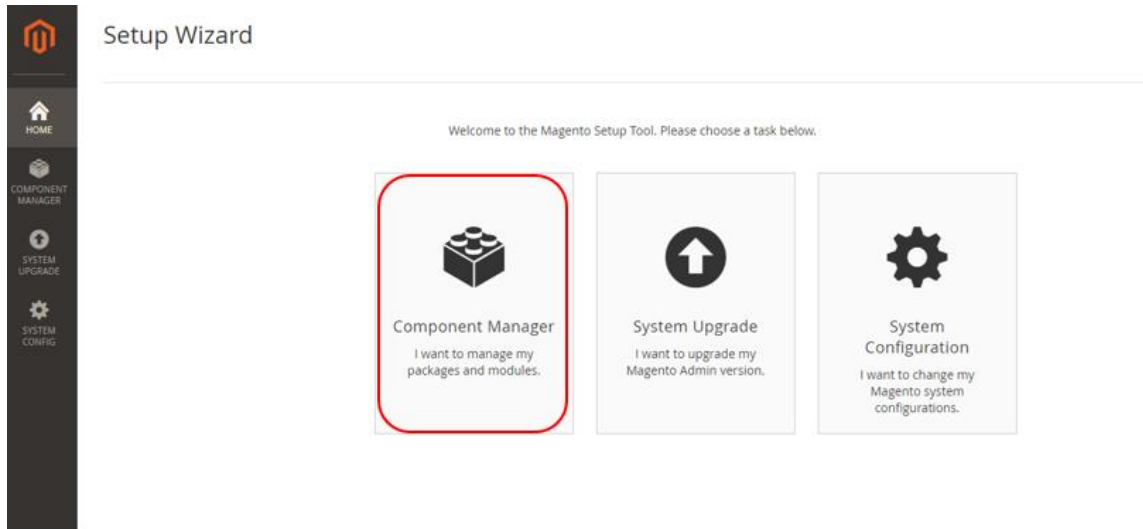

## 1. Login to your Magento 2 Admin Panel.

## 2. Open Component Manager

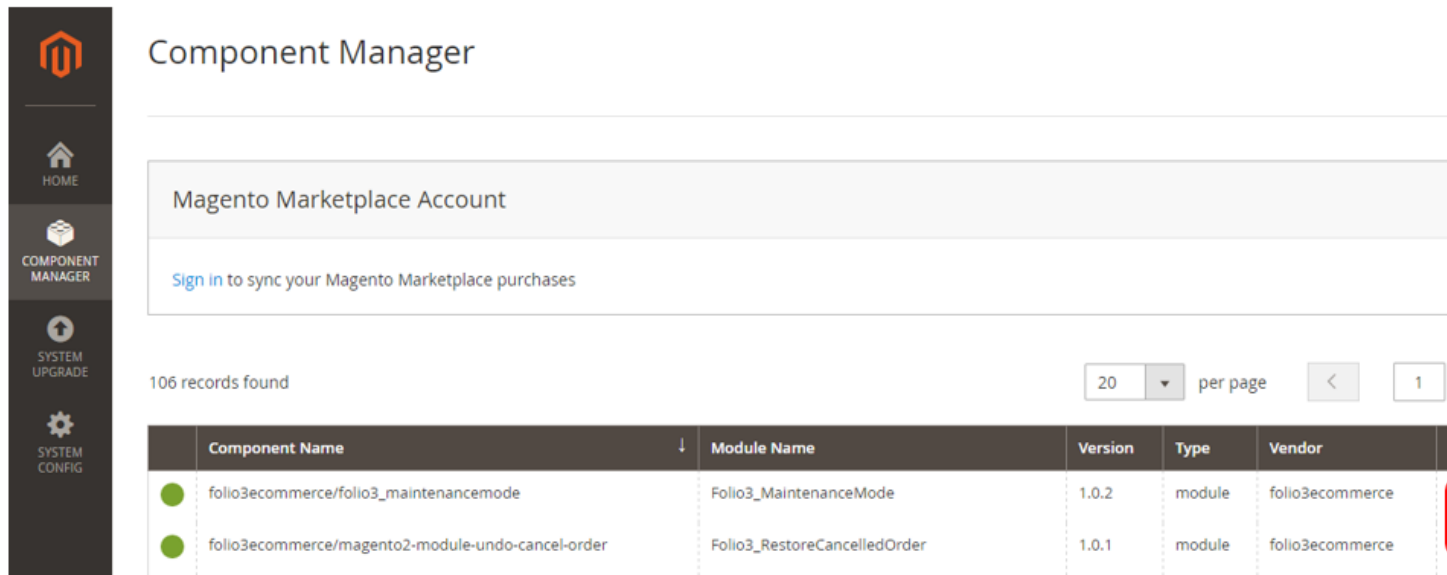

Navigate to System -> Web Setup Wizard -> Component Manager

### 3. Enable extension you want

In the list of components find extension you want to enable. Then press "Select" in "Actions" column and choose "Enable".

### 4. Start Readiness Check

# Enable undefined

## Step 1: Readiness Check

Let's check your environment for the correct PHP version, PHP extensions, file permissions and compatibility.

**Start Readiness Check**

### 4.1. Readiness Check Error

If you see error like that, try to setup magento 2 cron job and resolve other issues.

# Enable My\_Extensio

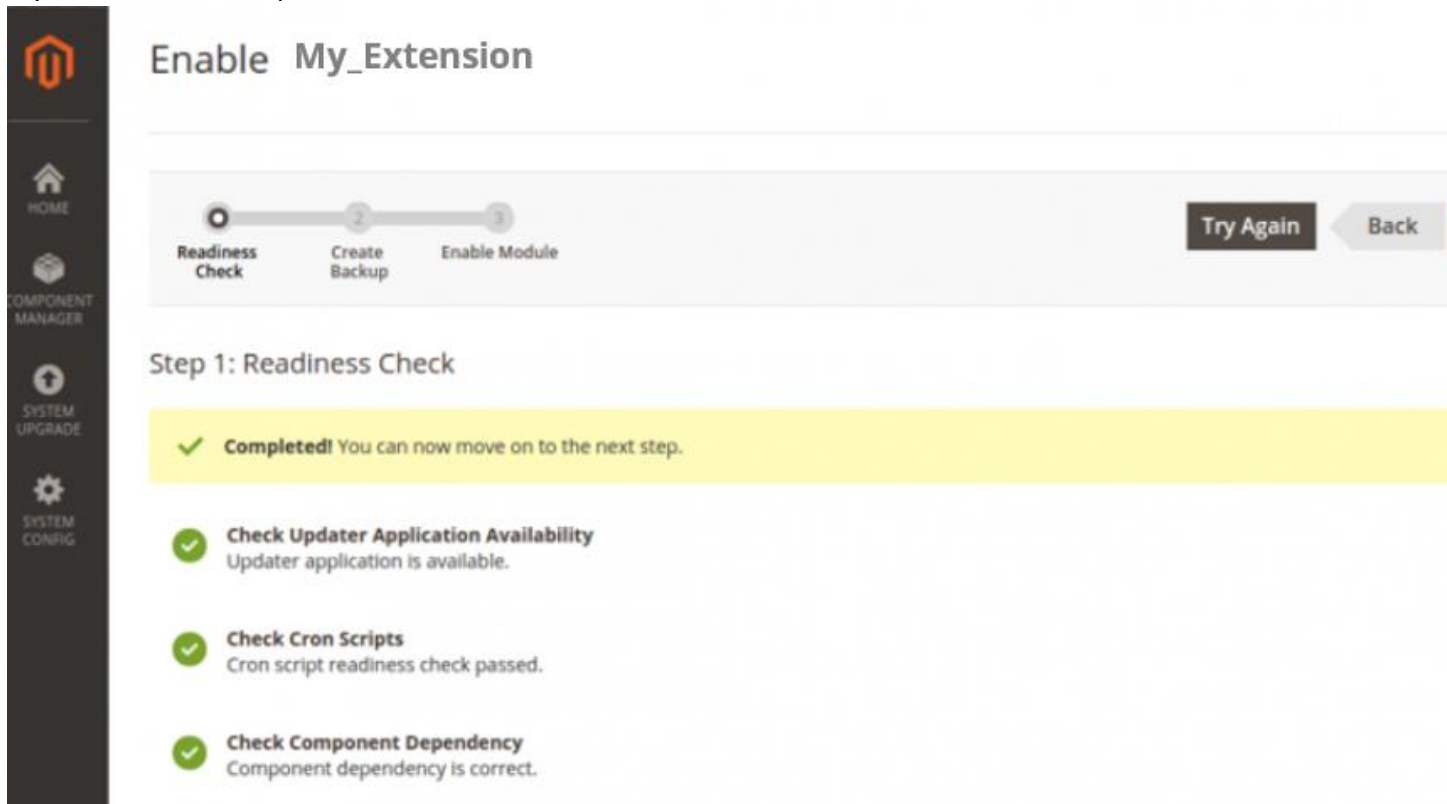

## Step 1: Readiness Check

**Error!** You need to resolve these issues to continue.

- ✘ Check Updater Application Availability**  
Updater application is not available. [Hide detail](#)  
Download and install the updater.  
For additional assistance, see [updater application help](#).
- ✘ Check Cron Scripts**  
Cron script readiness check failed. [Hide detail](#)  
Error from Updater Application Cron Script:  
Cron job has not been configured yet  
For additional assistance, see [cron scripts help](#).
- ✔ Check Component Dependency**  
Component dependency is correct.

## 4.2. Readiness Check OK

If you haven't errors press next.

The screenshot shows a web interface for enabling an extension. On the left is a dark sidebar with navigation icons: Home, Component Manager, System Upgrade, and System Config. The main content area is titled 'Enable My\_Extension'. At the top, a progress bar shows three steps: 'Readiness Check' (active), 'Create Backup', and 'Enable Module'. To the right of the progress bar are 'Try Again' and 'Back' buttons. Below the progress bar, the heading 'Step 1: Readiness Check' is followed by a yellow banner with a green checkmark and the text 'Completed! You can now move on to the next step.' Below this, three items are listed, each with a green checkmark: 'Check Updater Application Availability' (Updater application is available), 'Check Cron Scripts' (Cron script readiness check passed), and 'Check Component Dependency' (Component dependency is correct).

## 5. Create Backup (it may take some time)

## Enable My\_Extension

### Step 2: Create Backup

**⚠** We'll put your store in maintenance mode to protect your shoppers during the enable. After this point, you cannot cancel the enable.

- Backup Options
- Code
  - Media
  - Database

Let's check your disk space availability for taking selected backups, and then create the backups.

Create Backup

6. Once backup process is completed press “Next” button

7. Now you are ready to enable the extension.

## Enable My\_Extension

### Step 3: Enable Module

We're ready to enable Magefan\_Blog.

Enable

It usually takes some time. Please do not refresh page!
